

# DECODING EMOTIONS:

## HOW AI DECIPHERS FACIAL EXPRESSIONS

---

February 23, 2024

# INTRODUCTION

Emotions are what make us human.

**Emotion recognition software** uses artificial intelligence (AI) and machine learning to interpret human emotions from text, voice, facial expressions, and other non-verbal cues.

The global Emotion AI market generated **\$1.8 billion in 2022** and is projected to reach **\$13.8 billion by 2032**.

# INTRODUCTION

## Facial Emotion recognition

### Entertainment

- Face filters
- Virtual make up
- Emotion-aware Gaming

### Healthcare

- Telemedicine
- Patient Monitoring
- Autism Spectrum Therapy

### Automotive

- Real-time driver monitoring
- In-car personalization

### Marketing

- Test emotions in ads for targeted marketing
- Evaluate user experience with digital interfaces

### On-line meetings

- Track people engagement
- Analyse emotions during hiring interviews

a smart eye company

# Questions

- How good is AI in facial emotion recognition?
- What factors affect the algorithm performance?
- What emotions can be detected?

# READING HUMAN EMOTIONS FROM FACIAL EXPRESSIONS

Universal facial expressions that we all use, even across cultural divides (research by Dr. Paul Ekman)

## happiness

A real smile always includes:

- ① crow's feet wrinkles
- ② pushed up cheeks
- ③ movement from muscle that orbits the eye

## sadness

- ① drooping upper eyelids
- ② losing focus in eyes
- ③ slight pulling down of lip corners

## surprise

Lasts for only one second:

- ① eyebrows raised
- ② eyes widened
- ③ mouth open

## fear

- ① eyebrows raised and pulled together
- ② raised upper eyelids
- ③ tensed lower eyelids
- ④ lips slightly stretched horizontally back to ears

## anger

- ① eyebrows down and together
- ② eyes glare
- ③ narrowing of the lips

## disgust

- ① nose wrinkling
- ② upper lip raised

# KEY INGREDIENTS IN FACIAL EXPRESSIONS RECOGNITION

---

## Images of faces

...a lot of them

## Model

Learning Process with Convolutional Neural Network (not easy...)

# SUMMARY

- AI emotion recognition **works with videos**, not just images!
- Creating an effective model from scratch is a demanding process, requiring time and resources.
- **Data quality and quantity matter.**
- **Algorithms can fail** to detect faces or predict emotions accurately.
- **Limited number of emotions** can be recognized (for the moment).

**The big question – do we really want our every emotion on display?**
